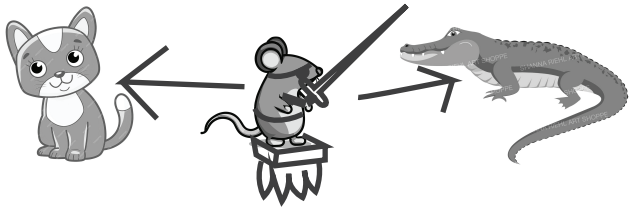
Collage Broad - AP Thinking Course 338.77

Example: Draw the arrows for the food chain



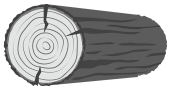
1. What vehicle would come 2nd in the race? Draw your answer.

2. What shape coresponds with the # of sides?

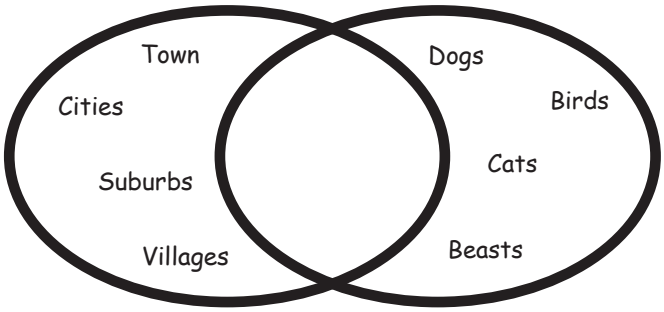
3	4	5	8	16

3. What Utensil is used to eat the food?

Example:			
			

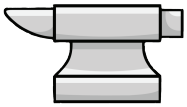


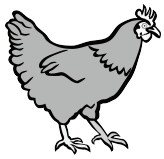
4. Fill in the Ven Diagram



5. Make it impossible to answer this question.

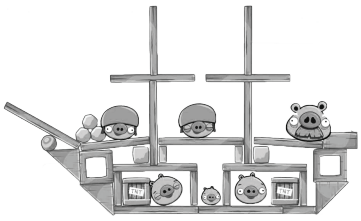
6. Protect the Chicken





7. What is 99 + 33?

8. What is the Optimal Launch for the Angry Bird?



9. Label 10 items in the image below

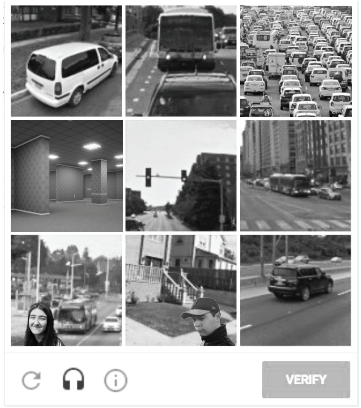
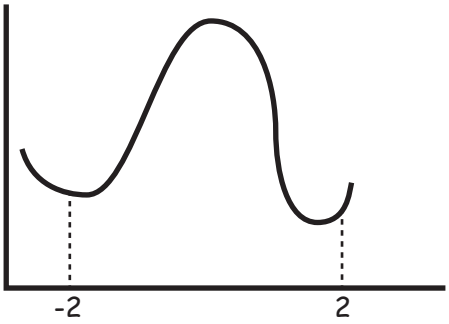
Collage Broad - AP Thinking Course 338.77

10. Circle all images with a bus.



11. What is the area under the curve?

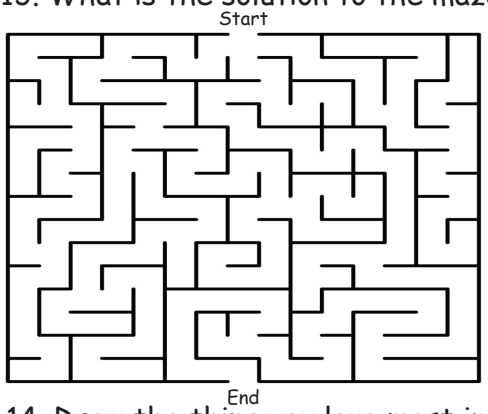
$y = x^4 - 5x^2 + 3$



12. What is the message of the story?

A long time ago there were three trees on a hill. 1 Tall tree, 1 Short tree, and 1 Sapling. When a storm was approaching the tallest tree said to the other trees,"Take shade under by branches it will protect you from the wind." The short tree complied and leaned under the tall trees branches. But the sapling rejected the help, and stood up on its own to face the storm. When the winds hit the tall tree got shook and shook but stood strong. And the sapling got knocked so hard it flew from the ground and up into the sky. When the storm settled the sapling had landed in a rabbit's den. The sapling said,"I must get back to my hill!". The wisest rabbit responded,"We will take you back to the hill if you can solve this riddle. You are facing three doors, one holding a lion, another fire, the other safety, and you have to choose a door. But there are 2 clones of you, each of which have the same knowledge. And you need to convince the clones to enter the doors before you so you can survive. But you have a secret advantage, you know that the clones don't know that the doors are locked. How do you survive?". A worm in the rabbit's den overheard this and told it to all the other worms in the local area. But as the worms passed the story got less and less precise, until it was about a rabbit having a lion and poison in their house. Upon the fourth day of deliberation the creature too heard, and when the Grand Karcist Iun heard it from within the short tree, the worms too heard it. And the wisest worm considered at what point along the chain the information changed. So it talked to every worm in the ground and graphed the information out, and it found a very interesting pattern. The information remained accurate until one worm got it wrong, then it rapidly declined. So the worm decided to do an experiment, it collected 100 lions and gave each one a number. The lions were told to hunt the lion with the number they received. But the lions had a plan, they decided to clone themselves, that way the number of lions hunting the number of lions were doubled. The worm was amused by the lion's attempt to change the experiment, so it formed a plan. It went to the tallest tree and told it,"The sapling is being held by a rabbit with a tiger and poison." The tallest tree considered this and quickly realized the lie. The tallest tree said nothing and quickly threw the short tree to the rabbits nest. But the short tree had a plan, it told the tigers to instead of hunting the lion with the number they were given, to hunt the lion which had their number. The tigers considered this and realized the genius of the plan. All the lions died. So the worm decided to restart the experiment, but gave the lions new numbers. After repeating the experiment 1000 times, the sapling became the new tallest tree. The new tallest tree then figured out the riddle. The Tallest Tree said,"To survive the doors I would swap two thirds of myself with 1 third of the others, thus giving them portions of my knowledge, that way they would be able to open the doors but I wouldn't." The wisest rabbit then freed the tallest tree. This is when the wisest worm formed a plan. It told 2 of the trees have to only tell truths, and 1 of the trees to only tell lies. But only told the role to each specific tree. Then the wurm told the trees to identify which one of them is fake. The sapling formed a plan, it decided to give all the trees an amulet that could create a rift to alternate dimensions. Then put the two trees into two planes flying around the earth one at 30km/h and one at 45 km/h, and told them they hit at an unexpected time. The trees considered the question and realized if they expected the time then it wouldn't happen, so they would have to expect the observation. But then the sapling modified the game, making it so the two trees would be unconscious for a majority of the journey, but be awakened at a random hour. So the two trees considered how to expect it but only when communicating at one time. This is when the tallest tree invented a time machine to return to the start of the experiment. The tallest tree then said,"Together we are trees." But the tallest tree knew it could only modify the timeline when the time was right, so it waited until the 5th 100 lions experiment to take action. At the second experiment it decided to tell one of the lions to ignore its target and attack all the other lions. This resulted in a cascade of attacks until only 1 lion remained, unlike the previous experiments. This caused the wisest worm to realize the truth. But the wisest worm of course didn't want to realize the truth, so it went back in time and killed the tallest tree's grandfather. Resulting in a paradox and infinite alternate dimensions. But the wisest rabbit has the ability to travel through these dimensions, so it starts heading through and telling all the rabbits to head to dimension 1 Back in the original three trees experiment the sapling had messed up. It had failed to observe the two planes resulting in them entering a superposition until observed. So Tall tree and Short tree were both in a superposition neither dead or alive. Ted said,"One day I hope to leave this place, go to the big city." But the short tree had a plan, when the rabbits started arriving it told each one to take 1 half of the tallest tree, and use it to build their dens. Resulting in each rabbit getting a continuously smaller piece of the tree. The short tree then told each rabbit to take that portion of the tallest tree back to their own dimension. Then the wisest worm started heading through 1 dimension at the rate it took for 10 new dimensions to be made. Meaning it will never make it to the end. But the worm had a plan, it told each rabbit to send its portion of the tallest tree back one to the dimension before. But before the worm can finish its plan it encounters a trolley about to hit 5 trees, unless it turns a level diverting it to 1 tree. It decided to divert the track, and it just so happened to kill the wisest rabbit in the farthest dimension that was about to kill that tallest tree's grandfather. At the end of the universal chain that wisest tree then finally observes itself, resulting it to leave its superposition, causing it to stop existing. This causes all previous tallest trees to stop existing causing a collapse of every rabbit's nest in every dimension as they were built with a piece of wood from the tallest tree. When the den collapsed in the original dimension the original sapling was finally tree, when it realized the storm was never real, the wisest rabbit had kidnapped them. So the sapling collect its tools and headed to the rabbits compound made of the shorted tree. The sapling then observed the compound causing it be instantly deleted. The wisest rabbit then said,"But how will you defeat my army?" Inside the compound is every wisest rabbit from every dimension and they started rushing towards the sapling. The sapling responed,"I don't need to defeat them, Cause I have my own army." The sapling then pulled out its amulet, and pulled in every lion from every dimension, creating a billion lions. The lions easily defeated the rabbits. The sapling decided to return home. The hill lacked the other trees, it would never be the same. As the sun set the tree reflected on it's journey, the allies, the enemies, and Ted.

13. What is the solution to the maze?



14. Draw the thing you love most in life, wether it be a person, a activity, a object, or a idea.

15. What comes next in the patterns?

2	4	6				
A	C	E				
	92 U Uranium 238.03					

16. Write a Haiku.

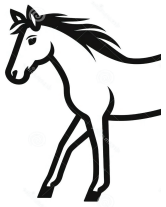
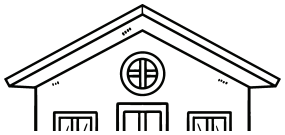
17. Modify the chicken defences to account for the heat death of the universe.

18. If the submarine moved 3 more units forward, What number would it be at?

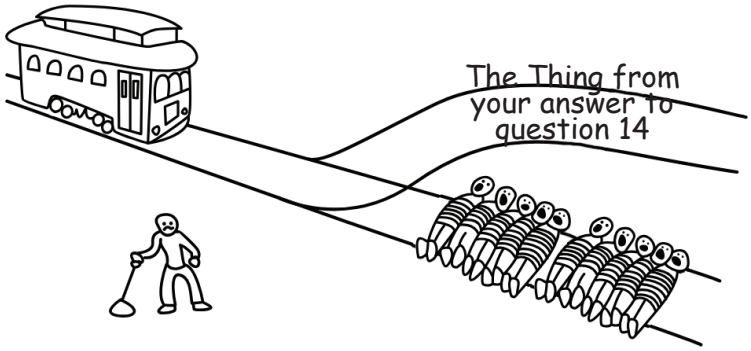
19. Draw a self portrait.

20. Finish Each Drawing.





21. Pull or no Pull?



22. Describe the image below.

23.
